713HIS Company has been formed for the straw matting of the same description as that now produced by hand-looms in the neighbourhood of Canton (Chiua). The export of Matting from Chins to the United States has of late years become a most important trade, having risen in the

last 10 years as follows :---From 179,472 rolls shipped in 1889/1890 370,107 rolls shipped in 1898/1899 but, as usual, the quality of the goods has fallen away with the increased demand. while prompt delivery, to contract time, has become increasingly difficult. Many attempts have been made to devise

alloom which could be worked by steam to take the place of the crude hand-loom's, used by the Chinese and Japanese, but on the above places, and Sella Drafts a d success has only been attained by a loom which became the property of the Kobe Manufacturing Co and which has since Deen brought to a high state of perfection by further inventions and improvements. The promoters of this Company, having experimented with a small trial plant of 50. of these power forms and introduced various further improvements suggested by their knowledge of the Matting trade and Balances, requirements of the market in the United Contract States, are now satisfied that Matting made by such machinery must supersede that made by hand-booms, and have accordingly entered into an agreement with the Kobe

Manufacturing Co. to acquire all the rights to the invention." While experimenting with the 50 locms, some 10,000 rolls were made and shipped, and the reports on the later and bettermade shipments were all of a highly favor? able and encouraging nature, the evenness of the fabric and the great improvement on the old hand loom matting, especially as regards the selvage or edge, being particularly praised and commonted on. One great difficulty was to get the machines to turn over the straw so as to produce a clean surface at the edges of the Matting; this difficulty was overcome some few months.

ago, and the looms can now, in the opinion of experte turn out a perfect fabric. As each power-loom can produce about 50 yards'a day as against 6 yards produced. boon to dealers, at home, who at present have to put up with much delay and loss of time in getting their goods.

The advantage is still more obvious today in view of the political unrest all over China and the great probability of the present troubles in the North spreading to the South, in which case the matting in dustry in the districts around Canton is likely to suffer to such an extent that it may take years to recover, matting being entirely dependent upon the labour of the ordinary farm work.

It is propsed to erect a Factory capable of running 450 looms, producing about 1.0, 0 rolls per annum, on which it is estimated, at the prices recently obtained in the United States for the Matting cent there for sale, there would be a net profit of at least \$13 per roll, or say \$150,0 0. -in course of time further experience and cconomies will undoubtedly improve upon these figures.

The premoters of this Company have, as before stated, experimented with 50 looms, and having acquired from the Kobe Manufacturing Company all the rights to the invention, will transfer the same to the new Company together with 50 looms and other machinery, stock-in-trade, goodwill, &c. for \$850,000 (Hongkong currency), which amount will be taken by the Kobe Manufacturing Company and the promoters in
